

Precision Ag Program

Welcome to the Agri-Future.

Monty's Precision Ag program leads the way.

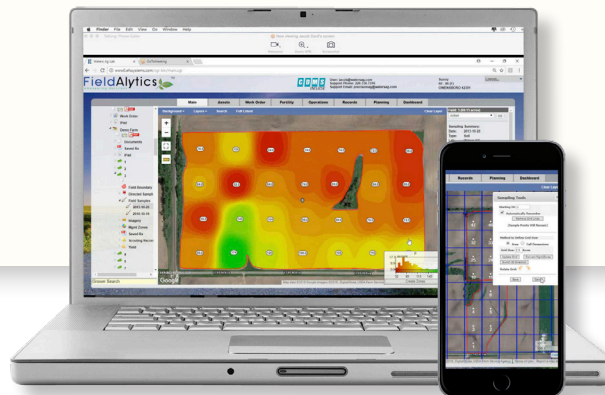

Today, higher yields are impossible without precision agronomy. Monty's Precision Agronomy Program is your data analysis software solution. This program uses soil and tissue samples, as well as FieldAlytics™ software, to give you accurate, real-time assessment of your fields and crops. Our system imports your data into an easy-to-use website – where you have secure access to your confidential results. This information will allow you to work with your Monty's representative to quickly and efficiently address any plant or soil issues in your fields.

Monty's Precision Ag Program:

- Is a fast, easy, exacting solution for you, the grower!
- Is secure, private, and web-based (not cloud-based)
- Is coordinated directly with your trusted Monty's representative
- Offers comprehensive results, usually within 48 hours
- Provides recommendations to address any nutrient deficiencies
